Information on Direct Vat Set / DVS

DESCRIPTION

DVS is a highly concentrated and standardized frozen or freeze-dried dairy culture, used for direct inoculation of milk. DVS cultures need no activation or other treatment prior to use.

APPEARANCE

Frozen DVS cultures are water-soluble pellets, approximately 5 mm in diameter, with off-white to brownish color. The pellets have a slight peptone-like odor. Freeze-dried DVS cultures are water-soluble granules, 2-5 mm in diameter, with off-white to slightly red or brown color. The granules have a slight peptone-like odor.

TECHNICAL DATA

Chr. Hansen's DVS cultures rely only on lactic acid bacteria internationally approved for the dairy industry. Our cultures are all of natural origin and are produced using the latest production technology. The number of viable cells in frozen DVS cultures is min 1×10^{10} cfu per gram. In freeze-dried DVS cultures the number is min 5×10^{10} cfu per gram.

PURITY

Chr. Hansen's DVS cultures comply with IDF 149A (International Dairy Federation) standards regarding maximum contaminant content.

STORAGE AND STABILITY

Frozen DVS cultures should be stored at -45°C (-49°F) or below. If frozen DVS cultures are stored correctly, the shelf life is at least 12 months. Freeze-dried DVS cultures should be stored at -18°C (0°F) or below. If freeze-dried cultures are stored correctly, the shelf life is at least 24 months. At $+5^{\circ}\text{C}$ (41°F) the shelf life is at least 6 weeks.

GUARANTEE

Chr. Hansen's dairy cultures are produced in strict conformity with the regulations of local health authorities.

TECHNICAL SERVICE

Chr. Hansen has internationally dispersed development centers, as well as application centers in all major dairy markets. For specific application advice and support, please contact your local Chr. Hansen representative

PERFORMANCE RATING

Chr. Hansen cultures are designed to perform in specific product applications and our range covers a wide selection of cultures with unique performances. The culture's performance is, when relevant, rated for acidification speed, phage robustness, flavor contribution, gas production, texture, and/or post acidification on a scale from 1 to 5 in which 1 is low and 5 is high.

Information on Enzymes and Coagulants

DESCRIPTION

CHY-MAX® M is a second-generation fermentation produced chymosin (FPC), which delivers numerous benefits including yield increase, dosage reduction, improved texture stability, better taste, reduced bitterness and increased whey value.

CHY-MAX® Extra is the first-generation FPC, which delivers several benefits such as increased yield, better flavor profile and enhanced whey value when compared with microbial coagulants.

Hannilase® Is a microbial coagulant produced by the fungus *Rhizomucor miehei*. HANNILASE® is the right coagulant for Organic cheese (NB version), home made and informal cheese production.

YieldMAX® PL enhances fat value and improves yield in pizza cheese.

LactoYIELD® enhances whey value and increases yield in pizza cheese.

Ha-Lactase™ hydrolyses lactose to a mixture of glucose and galactose.

TECHNICAL DATA

In order to meet your needs, Chr. Hansen enzymes and coagulants are available in different packaging sizes and different strengths, both in liquid and granulated forms

PURITY

Chr. Hansen's fermentation produced enzymes are tested for the relevant mycotoxins and metabolites according to JECFA's General Specifications for Enzymes.

STORAGE AND STABILITY

Liquid coagulants should be stored under refrigeration at 32 to 46°F or 0 to 8°C (avoid freezing) to ensure maximum activity. Shelf life is 12 months from quality release when stored according to the recommended storage conditions. Shelf life is limited to 6 weeks after opening, provided the product is kept according to the recommended storage conditions.

Powder coagulants should be stored dry at <10°C / <50°F. Shelf life is 24 months from quality release when stored according to the recommended storage conditions. Shelf life is limited to 3 months after opening, provided the product is maintained according to the recommended storage conditions.

GUARANTEE

Chr. Hansen's enzymes and coagulants are produced in strict compliance with the regulations of Danish and other relevant health authorities for the production of food enzymes.

TECHNICAL SERVICE

Chr. Hansen has internationally dispersed development centers, as well as application centers in all major dairy markets. For specific application advice and support, please contact your local Chr. Hansen representative

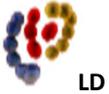

PERFORMANCE RATING

Chr. Hansen enzymes and coagulants are designed to perform in specific product applications. Our range includes a selection of products with different activity strength expressed in IMCU/ml, NLU/g, LEU-P/ml or LFU.

Types of Microorganisms in Dairy Cultures

Culture Type	Name	Characteristics
	<i>Lactococcus lactis</i> subsp. <i>cremoris</i> <i>Lactococcus lactis</i> subsp. <i>lactis</i>	Mesophilic Homofermentative Flavor contribution
	<i>Leuconostoc</i> sp.	Mesophilic Heterofermentative Gas production
	<i>Lactococcus lactis</i> subsp. <i>lactis</i> biovar <i>diacetylactis</i>	Mesophilic Homofermentative Flavor contribution Gas production from citrate
	<i>Lactococcus lactis</i> subsp. <i>cremoris</i> <i>Lactococcus lactis</i> subsp. <i>lactis</i> <i>Leuconostoc</i> sp. <i>Lactococcus lactis</i> subsp. <i>lactis</i> biovar <i>diacetylactis</i>	Mesophilic Heterofermentative Flavor contribution Gas production
	<i>Streptococcus thermophilus</i>	Thermophilic Homofermentative
	<i>Lactobacillus helveticus</i>	Thermophilic Homofermentative Flavor contribution
	<i>Lactobacillus delbrueckii</i> subsp. <i>bulgaricus</i>	Thermophilic Homofermentative Flavor contribution
	<i>Lactobacillus paracasei</i>	Mesophilic Fac. Heterofermentative Flavor contribution
	<i>Lactobacillus delbrueckii</i> subsp. <i>lactis</i>	Thermophilic Homofermentative Flavor contribution
	<i>Lactobacillus rhamnosus</i>	Thermophilic Fac. Heterofermentative Flavor contribution
	<i>Lactobacillus curvatus</i>	Mesophilic Fac. Heterofermentative Flavor contribution

Types of Microorganisms in Dairy Cultures

Culture Type	Name	Characteristics
 Lb pl	<i>Lactobacillus plantarum</i>	Mesophilic Fac. Heterofermentative Flavor contribution
 Lb jo	<i>Lactobacillus johnsonii</i>	Thermophilic Homofermentative Flavor contribution
 P ac	<i>Pediococcus acidilactici</i>	Thermophilic Homofermentative Flavor contribution
 PC	<i>Penicillium candidum</i>	Surface yeast Flavor contribution White to grayish color tones
 PR	<i>Penicillium roqueforti</i>	Core yeast Flavor contribution Green to bluish color tones
 GEO	<i>Geotrichum candidum</i>	Surface yeast Flavor contribution
 LAF	Yeast	Surface yeast Flavor contribution pH neutralizing and/or fermenting properties
 SALSA	<i>Staphylococcus xylosus</i>	Flavor contribution
 BL	<i>Brevibacterium</i>	Smearing bacteria Flavor contribution Surface coating Orange color tones
 PAB	<i>Propionibacterium</i>	Thermophilic Heterofermentative High gas production
